

Free, Real-Time Feed of the Latest Novel Coronavirus Research & News from Across the Web

◀ ATYPON IN THE NEWS

MARCH 11, 2020

Santa Clara, CA — In response to the worsening global health emergency, Atypon has created a website with a free, real-time feed that delivers the latest peer-reviewed research, preprints, and news on the novel coronavirus outbreak as soon as it is published.

The [Novel Coronavirus Outbreak Special Edition](#) feed aggregates content from over 30,000 authoritative sources across the web to make the discovery of related, trusted information faster and more comprehensive for researchers, medical practitioners, and the general public. It includes research that the Wellcome Trust and publishers worldwide are making freely available in the wake of the outbreak.

The [social media-like feed](#) of research papers, preprints, news, and tweets related to the virus is driven by Scitrus, Atypon's AI-based discovery technology.

"Events like this remind us that the industry we serve publishes some of the world's most important content—and of our responsibility to get that content into the hands of the researchers and practitioners who need it most," said Marty Picco, Atypon's General Manager. "We hope that our technology helps professionals combating this outbreak to get the latest facts and discoveries sooner, and put them into practice faster."

The Novel Coronavirus Outbreak Special Edition feed is publicly available at <https://www.scitrus.com/special/novel%20coronavirus%20outbreak>.

About Atypon

Atypon develops publishing technologies for getting mission-critical content into the hands of the practitioners and researchers who need it most. Atypon's online publishing and website development tools let publishers manage, deliver, and monetize all of the content they distribute—from standards and scholarly articles to video and online courses. Atypon's tools for researchers let them easily author, discover, and access the content they need. Founded in 1996, Atypon is headquartered in Santa Clara, California, with over 470 staff in 9 offices around the world.
